Situation: School Maintenance Staff were engaged in an endless cycle of waxing, buffing, stripping and re-waxing in order to maintain the epoxy terrazzo entrance to Volusia County's largest high school.

Solution: A local Adsil certified installer stripped off the topically applied wax layering, deep cleaned the epoxy terrazzo floor and applied a single coat of MicroGuard AD708 Clear.

Results: The 'wax-on, wax-off cycle' was broken. Nightly buffing with swing machines was terminated and five years after installation, the floor continues to look great. The School Maintenance Staff and School Administration continue to promote Adsil and to enjoy the benefits of the MicroGuard Clear Protective System.
