

CASE STUDY:

Memorial Regional Hospital Tile Floors – Miami, FL

Situation: Over time and countless cleaning cycles, the grout had become porous and grime impregnated and would not release out of the grout.

Solution: Following a deep clean of the surfaces using Adsil MicroKleen™ cleaners and conditioners, the tile and grout surfaces were treated with the MicroGuard Clear Treatment Systems.

Results: The porous grout was completely sealed, which allowed for easier routine cleaning maintenance and the tile surface was restored to a beautiful glossy appearance. Hospital janitorial services staff were ecstatic concerning the results and the ease of cleaning and routine maintenance.
